Getting Started with Classroom-Level Reporting Quick Reference Card

Getting Started with Classroom-Level Reporting

On the Schoolnet home page (My Schoolnet), find student assessment information to identify and organize students based on recent assessment data. You can view overall and standard performance for any current year benchmark or classroom assessment by class, as well as recent standardized tests. Shortcuts provide quick access to additional reports to delve into the data.

On the home page, My Schoolnet, use the My Classroom 'widget' to select the class of students you wish to view. Administrators have additional menus to select a teacher and school if applicable.

The District & Local and Classroom Tests

In the Classroom Assessment Monitor widget, the District & Local Tests and Classroom Tests tabs function the same way; the only difference is the source of the tests. For current year tests, view overall performance for the selected class.

Below the overview, find results for each student in performance order. You can filter list by score group(s).

In the Performance by Standard menu, you can select a tested standard for the selected assessment to filter the view

Standardized Tests

Under the Standardized Tests tab, select a test date or leave the default value, the most recent standardized test data per student.

The numbers in the cells represent the percentage of students in a section who earned a proficient score for the tested subjects. Scores appear by student for the selected subject. Click another subject to change the view. The colored boxes indicate the score groups.

Under “Filter By Score Group,” roll your cursor over a square to view the associated score group or click the square to filter the students.

Click **Standards Mastery** to run a report of the number of students per score group and subject for the selected class.
