View Class-Level Standards Performance Over Time Quick Reference Card

View Class-Level Standards Performance Over Time

Two areas in Schoolnet support viewing standards performance over time at the classroom level, the Standards Performance Dashboard and the Student Performance Standards Mastery Trends report.

Access and Filter the Standards Performance Dashboard

Using the Standards Performance Dashboard, teachers and administrators can analyze standards performance over time for selected class sections or student groups.

Accessing the dashboard:

1. On the home page in the My Classroom widget, select a class in the section menu
2. In the Classroom Assessment Monitor widget, choose from the District & Local Tests and Classroom Tests tabs and then click **Standards Performance**

3. If this is your first visit to this report type, you will be presented a summary page detailing the available features: review the content and click **Got It!**
4. In the Standards Performance Dashboard, use the filters to select students by class(es) or by any student group you created previously
   For details about student groups, refer to the *Create and View Student Groups Quick Reference Card.*
5. Select the test(s) for which you want to view standards performance

   Tip: "Quick pick" links appear at the top of the Tests menu list. These links clear current selections and select only those tests that fall into the date range you selected.

6. For Display, choose between Percent Correct and Proficiency/ Score Groups
   If the Proficiency/Score Groups display is selected, the aggregate summary will be interactive.
7. Choose the desired standards options:
   - Show Primary Standards Only: unselect to report on both primary and non-primary item alignment performance
   - Show Assessed Standards Only: unselect to see all standards in a tree, to visualize which skills have not been assessed

View Class-Level Standards Performance Over Time

Understanding the Standards Dashboard

Charts show how selected sections or student groups performed against the standards for the items on the selected tests.

For each standard assessed, a performance tile shows performance per test and most recent proficiency. Users can expand the interactive standards tree to see a performance breakdown by sub-standards across the selected tests. The score groups and colors pull from the test's configured score groups and cut scores.

Hover over any section of the chart for more detail.

Use the arrows to navigate to lower-level standards.

Click the “M” icon to access a list of any available instructional materials aligned to the corresponding standard.

View the Standards Performance Detail View

From the Standards Dashboard, click a chart to view a breakdown of the data.

The top of the page shows overall performance by test.

Hover over a bar to see details. If the display is set to Proficiency/Score Groups, a student count is shown.

Below this is the Individual Student Progress by Test. In the table, each student is listed next to their overall standards performance average and a small bar chart to illustrate their per-test achievement.

View Class-Level Standards Performance Over Time

If performance data exists for multiple tests, a line graph appears on this page. Select student names to plot as lines on the graph against a backdrop of per-test cut scores and class mean, illustrating their longitudinal progress toward standards mastery. Use the Chart Color column as a color legend, or hover over a line for detail.

If only one test is covered by the selected standard, the page has a different layout. Instead of a line graph, a circle indicates class performance.

You can return to the main dashboard by clicking **Standards Dashboard**.

Standards Mastery Trends Report

Use the trends report to compare up to six tests. The report displays the percentage of students classified as proficient for each standard.

To run the trends report:

1. On the home page in the My Classroom widget, select a class
2. In the Classroom Assessment Monitor widget, choose from the District & Local Tests and Classroom Tests tabs and then click **Standards Mastery**
3. For the Test Type option, choose 'Trends'
4. Use the filters as needed to locate and add up to six tests
5. Click **Go**

The numbers in the cell refer to the percentage of the class that was at least proficient on the standard. For example, if the cut score for proficiency is 75%, a cell with a 77% indicates that percent of students achieving 75% or higher of the total point value of items aligned to that standard for the test.
