Classroom Level Skills Analysis Report
Quick Reference Card

Classroom Level Skills Analysis Report

In Schoolnet, use the Skill Analysis report at the classroom level to view standards mastery organized by student for benchmark or classroom tests. Learn how to run the report for a single test or year-to-date results. The report displays the average percent correct and the points achieved on each standard assessed on the test for each student as well as the section average.

To access and view the report:

1. On the home page, select a class in the My Classroom widget
2. In the Classroom Assessment Monitor widget, select the District & Local Tests or Classroom Tests tab as applicable

3. If necessary, filter on a subject and then select the desired test

4. Click **Skills Analysis**

	SCI.6.4	SCI.6.5	SCI.6.6
District Average	85.6% (5899/6892)	84.5% (23298/27568)	67.0% (18481/27568)
School Average	96.1% (446/464)	89.0% (1651/1856)	77.8% (1444/1856)
Section Average	100.0% (24/24)	94.8% (91/96)	81.3% (78/96)
BERRYMAN, JUAN	100.0% (1/1)	100.0% (4/4)	50.0% (2/4)
CAHILL, ROBIN	100.0% (1/1)	100.0% (4/4)	100.0% (4/4)

For each student, view the average percent correct as well as points achieved versus possible. The school and district average appears for benchmark category tests.

Depending on the standards to which the items are aligned, you may be able to toggle among the levels of the standards hierarchy. Your terminology may vary.

Roll your cursor over a standard to see the full text; click it to view an inventory of instructional materials aligned to the standard.

Year-to-Data Skills Analysis

For standards assessed on more than one test, the report will show an aggregate score from multiple assessments, with the total points achieved over the total points possible for every question aligned to the standard.

To run a year-to-date report:

1. Navigate to the report as described on the previous page
2. Click **Change Test**

3. Filter by Test Type and Subject
4. For Test Name, select **Year-To-Date**

View Tests Aligned to Multiple Standards Sets

On reports for tests including items aligned to more than one standard or with items across multiple standards documents, you will see additional options.

If the test has items from multiple standards sets, you can view all by default or filter as needed.

If an item is aligned to multiple standards, one serves as the primary alignment. Choose to view the report with all standards or only the primary alignments. When viewing both, primary standards are indicated with the **P** icon.
